

Get the tangent of two points

```
double angle1 = Math.toDegrees(Math.atan2((cell1.y - reference.y), (cell1.x - reference.x)))
```

```
angle1 -= 180
```

```
double angle2 = Math.toDegrees(Math.atan2((cell2.y - reference.y), (cell2.x - reference.x)))
```

```
angle2 -= 180
```

Return true if the first angle is bigger than the second one

```
Math.abs(angle1) > Math.abs(angle2)
```
